Diagenesis/porosity model for a ramp in a rising sea level (TST). Diagenesis/porosity model for a rimmed shelf during a rising sea level (TST).

Carbonate Reservoirs: Porosity, Evolution and Diagenesis ...

The nature of carbonate porosity and its control by diagenesis is explored. Porosity classification schemes are detailed, compared, and their utility examined. The nature and characteristics of diagenetic environments and tools for their recognition in the ancient record are specified.

Carbonate reservoir descriptions are based on observations of depositional and diagenetic fabrics and pore space from core and cuttings samples. The descriptions are correlated with wireline log responses and incorporated into geological facies and/or diagenetic models in order to map porosity, water saturation, and permeability.
