How do the physical properties of the gel help DNA migrate from one end of the gel to the other? It has holes like a sponge, making it easy for the DNA to move. Where is the DNA sample place before electrophoresis?

Gel Electrophoresis Web Quest Flashcards | Quizlet

The DNA you have extracted is genomic, meaning that you have the entire collection of DNA from each cell. Unless you cut the DNA with restriction enzymes, it is too long and stringy to move through the pores of the gel. A scientist with a lab purified sample of genomic DNA might also try to sequence it or use it to perform a PCR reaction.

Virtual Labs: Building DNA, transcription, translation & extraction Go through the steps outlined below to review genetic concepts learned in class.

Virtual Labs: Building DNA, transcription, translation ...

Answers - PCR Virtual Lab () 1. The human genome is made up of 3 billion base pairs (per diploid cell). 2. Polymerase Chain Reaction (PCR) is used to diagnose diseases, identify bacteria and viruses, match criminals to crime scenes 3. Not a lot of DNA is required for PCR so this means you do not need a large source of DNA (a small drop of blood , skin, or hair follicles will do).
