You can search Google Books for any book or topic. In this case, let's go with "Alice in Wonderland" since it's a well-known book, and there's probably a free eBook or two for this title. The original work is in the public domain, so most of the variations are just with formatting and the number of illustrations included in the work. However, you might also run into several copies for sale, as reformatting the print copy into an eBook still took some work. Some of your search results may also be related works with the same title.

In this paper, the time-fractional wave equation associated with the space-fractional Fokker-Planck operator and with the time-fractional-damped term is studied. The concept of the Green function is implemented to drive the analytic solution of the three-term time-fractional equation. The explicit expressions for the Green function  $G_3(t)$  of the three-term time-fractional wave equation with ...

Nowadays, there is an infinite number of applications that someone can do with Deep Learning. However, in order to understand the plethora of design choices such as skip connections that you see in so many works, it is critical to understand a little bit of the mechanisms of backpropagation. If you were trying to train a neural network back in 2014, you would definitely observe the so-called ...

Morin unrigorously derives the classical physics theorems in generality using unrigorous vector calculus, making it a more suitable follow up to Kleppner and prerequisite to Goldstein (which is the standard doctoral text). Notice, though, that Taylor covers significantly more topics than Kleppner and Morin combined.

Biochemistry or biological chemistry, is the study of chemical processes within and relating to living organisms. A sub-discipline of both chemistry and biology, biochemistry may be divided into three fields: structural biology, enzymology and metabolism. Over the last decades of the 20th century, biochemistry has become successful at explaining living processes through these three disciplines.
